Mixed Phenotype Acute Leukemia with t(v;11q23.3); KMT2A Rearranged

National Cancer Institute

Source

National Cancer Institute. *Mixed Phenotype Acute Leukemia with t(v;11q23.3); KMT2A Rearranged*. NCI Thesaurus. Code C82203.

A rare mixed phenotype acute leukemia in which the blasts also carry a translocation (v;11q23.3) involving the KMT2A gene. The prognosis is usually unfavorable.
