Potential competing interests: No potential competing interests to declare.

This is a meaningful research in terms of conservation and development. The paper is well written with sound methodology. I suggest it being accepted for publication. However, there are a few concerns from my side. It is needed to analyze the tradeoff between conservation and development, and clarify the reasons why conservation is highly contradictive. On the other hand, the evolutionary game theory might be used to reveal the succession of economic development along with the degradation of ecosystem.
