Potential competing interests: No potential competing interests to declare.

This paper presents interesting considerations about a Data-driven governance model for Healthcare systems. It is a good reflection and conversational paper but poor details are given about the methodology used to analyze and develop the model and about data supporting those considerations and strategic plan. In a certain sense it is a contradiction with the proposed statement (data supporting strategies for healthcare systems).

I encourage the author to provide also more practical and evidence-based actions for the implementation of the suggested approach/model.
