Potential competing interests: No potential competing interests to declare.

The author presents a very interest topic of sentiment analysis, which is within prominent areas of machine learning and natural language processing. The article in the current form is not comprehensive, there are several aspects that the authors can consider to improve it, for example, the author could not consider a different way to represent token features and how different machine algorithms can be combined, the reviewer would suggest the author to read and refer the following publication:

Yaxin Bi. Sentiment classification in social media data by combining triplet belief functions. J. Assoc. Inf. Sci. Technol. 73(7): 968-991 (2022)
