**Potential competing interests:** No potential competing interests to declare.

Overall, the paper is good and motivating but needs minor revisions with these aforementioned comments:

- The introduction is not properly exploited. Add a few more literature and motivation for why to carry out this study.
- The abstract is too concise. It would be better if you could add study motivation, practical implementation, and methods used.
- In the method section, more analysis should be included to demonstrate the relationship between the elements.
