

Review of: "How Blockchain Technology Can Address Circularity and Trace Emission in the Energy Sector"

Antonio de S. Limongi França

Potential competing interests: No potential competing interests to declare.

The article is very well written. Congratulations to the authors. I have no comment to make. I ask about the possibility of replicating the model in other segments of the economy, such as, for example, analyzing issues related to agribusiness. Blockchain could be used to guarantee the legitimacy of each declared carbon credit in projects of this segment.
