Title: Agritourism: A Source for Socio-economic Transformation in Developing Economies

Authors: Promise Zvavahera and Farai Chigora

Main Comments	Specific comments
Abstract: The abstract is a bit long and repetitive. The study is mostly a conceptual paper that contains a literature review that identifies both the positive and negative aspects of existing research. This should be clearly defined in the introduction.	Consider deleting any repetition and identifying the article's focus as largely a conceptual work with a literature review component to improve the abstract. Mention the case studies and specific examples discussed in the paper to provide readers a better idea of the scope and content.
Introduction: The following crucial points should be addressed in the introduction: <ol style="list-style-type: none">1. Agritourism Context and Relevance Definition2. Research Deficit and Motivation3. Research Questions and Goals4. Scope and Restrictions5. Methodology Overview6. The Paper's Structure	Introduction: The introduction might be improved by including up-to-date statistics and examples that highlight agritourism's present relevance in emerging economies. Consider emphasizing your study's distinctive contributions, such as fresh insights or perspectives on agritourism, as well as any policy implications that may result from your findings.
Critical Review: Relevance: The article addresses the timely and essential topic of agritourism's ability to contribute to sustainable development in developing countries' rural areas by integrating agriculture and tourism to produce new revenue streams and drive economic growth. Literature Review: The writers present a thorough examination of the benefits and drawbacks of agritourism. To enrich the study, additional recent research and insights from other developing economies should be useful. Methodology: Due to the lack of a well-defined research methodology, the paper's conclusions may lack validity or trustworthiness. To strengthen their thesis and provide more solid facts, the authors may have used a more rigorous approach, such as a case study with supporting primary or secondary data or quantitative comparative research of different countries.	Critical Review: Relevance: Mention any worldwide trends or recent changes that have made agritourism a more pressing issue for policymakers and practitioners to stress the importance of agritourism. Discuss the growing importance of sustainable development goals and climate change mitigation in relation to agritourism, for example. Literature Review: Consider including more interdisciplinary perspectives from subjects such as economics, sociology, and environmental science to enrich the literature evaluation. Furthermore, integrating more research from poor nations will provide a more comprehensive knowledge of the specific challenges and opportunities presented by agritourism in these situations. Methodology: To improve the process, provide a thorough explanation of the criteria used to select case studies and examples, as well as the methodology used to analyze the data. Consider employing additional research methods, such as interviews with agritourism practitioners or tourist surveys, to gather more primary data and support your findings. Discussion: Expand on the potential long-term implications of agritourism on rural communities and ecosystems in the comment area. Investigate the effects of agritourism on local culture, customs,

Discussion: The authors identify important agritourism problems, such as a lack of public awareness, budget limits, and inadequate infrastructure. They propose alternatives such as increased agritourism promotion, targeted financial incentives, and capacity-building programs. A more in-depth research and examples of successful agritourism programs in emerging economies could help to highlight possible consequences and lessons gained.

Case Studies: The case studies offered lack supporting statistics to demonstrate the benefits of agritourism in the countries listed. More particular information, such as the number of households benefiting from agritourism, revenue generated by projects, employment figures, tourist numbers, and firsthand experiences from agritourism places, would be of interest to a reader.

Conclusion: The conclusion effectively summarizes agritourism's potential for socioeconomic development in emerging economies. It might, however, provide more tangible advice for policymakers, practitioners, and researchers to better promote and expand agritourism. The conclusion effectively summarizes agritourism's potential for socioeconomic development in emerging economies. It might, however, provide more tangible advice for policymakers, practitioners, and researchers to better promote and expand agritourism.

The study is a good starting point to the concept of agritourism in developing nations, but there is need to adopt a more rigorous research methodology, in-depth analysis, and particular case studies. Future studies could build upon this literature review to address how agritourism initiatives in developing countries can scale up.

and social dynamics. Furthermore, investigate the role of technology and innovation in expanding agritourism efforts and supporting sustainable practices.

Case Studies: Provide additional extensive information on the various agritourism programs, including their aims, implementation techniques, and outcomes, to strengthen the case studies. Provide facts and data to back up your claims about the benefits of agritourism and incorporate direct quotations or testimonies from local stakeholders to give depth and validity to your research.

Conclusion: Summarize your study's important findings and ideas in the conclusion, stressing their relevance for policymakers, practitioners, and researchers. Consider the unique difficulties and opportunities highlighted in your investigation and make clear, concrete recommendations for promoting and strengthening agritourism programs in developing economies.

Additional Suggestions: Consider including a section on successful agritourism programs in both developing and developed countries. This data could be useful for practitioners and policymakers looking to create and implement successful agritourism projects. Address potential impediments to agritourism adoption, such as cultural resistance or a lack of political support and provide solutions to these difficulties.
