Potential competing interests: No potential competing interests to declare.

First of all, I would like to thank the authors for their hard work. Then I would like to thank the team who directed me to evaluate the study.

I think that your research paper is quite an important and under-studied topic for your country, which we estimate is quite dense in the literature. I noticed that this issue is being studied in different countries. However, I realized something in this study, which I believe will contribute to the literature in your country. It may be helpful to be more descriptive about the Kenyan education system, school and learning structure, and the time period in which the research was conducted. There are also many factors that can affect the results. Can you describe these and similar situations as limitations? I would like to know your thoughts on the generalizability of your research results. A difficult process like the pandemic has had very different effects on education all over the world. Many countries have started to use distance education and hybrid hybrid models. I think it would be appropriate to briefly talk about such an effect.

I wish you the best of luck and best regards.
