**Potential competing interests:** No potential competing interests to declare.

The article is in general well written. I recommend the following revisions:

1. Abstract and introduction should state the novelty of the work more clearly.
2. Results should be validated.
3. The methodology should be explained in more detail.
4. What is the effect of varying boundary conditions.
5. References should be improved majorly.
6. The language of the study should be improved.
