Potential competing interests: No potential competing interests to declare.

The article has a very practical but systemic approach to the subject as well, so it is worthy of publication. Needs more illustration, starting with the map of the Caves' location within Africa and Zimbabwe, the province where Caves located, and then continuing with particular photos from the Caves themselves, especially those ones showing examples of bad and good practices on the spot mentioned in the text. This addition would be very useful for readers' better understanding of the issue elaborated in the article.
