Levonantradol

National Cancer Institute

Source

National Cancer Institute. *Levonantradol*. NCI Thesaurus. Code C1385.

A synthetic cannabinoid analogue of delta (9)-tetrahydrocannabinol (delta(9)-THC) with antiemetic and anti-analgesic properties. Although its precise mechanism of action is unknown, levonantradol appears to bind and activate the cannabinoid receptors CB1 and/or CB2. (NCI04)
