The manuscript is good and requires no English editing. Results and discussion sections were informative and contained few mistakes. However, there are some points that should be considered to increase the quality of the manuscript

1. In the abstract, method sub-section, change "and" before SPSS software to "by" SPSS software, since SPSS is a software program and not a type of statistical test.
2. In the method section, write the name of the author of the study referred to by reference number 17.
3. What is the meaning of the abbreviation GHQ?
4. Reliability tests should be performed by the researchers themselves and not obtained from other studies. The authors should explain the procedure of the pilot study and the results of the reliability test.
5. The access date of reference number 5 should be added.
6. Page numbers, volume, and issue numbers were missing from some references.
7. The author should add a specific section for the "limitations of the study."
