

Review of: "Acoustic Over-Exposure in the Institutional Land Use of Calabar Metropolitan Area, Cross River State, Nigeria"

Anila George

Potential competing interests: No potential competing interests to declare.

I appreciate the author selection for the current study.

1.The abstract should summarized and key points must be highlighted.

2.A detailed literature survey is needed.

3.The methodology is insufficient and it should need more clarification. Sampling methods ,research tools etc would add to improve the quality.

4.Data collection period is not in the paper.

5.The title problematic is not apt for the paper .

6.Location regarding data collection need clarity.

7.Survey analysis can be included.

8.The article is nor written according to the journal format.

9.Reference area should be improved and update references. Follow the standard APA style and doi should be included.

I am sorry to inform that the article need a good revised version and conduct a deep study.. The manuscript should be accepted after adequate revision. However it needs improvement in several areas and it is very hard to recommend in its current form.
