Potential competing interests: No potential competing interests to declare.

Artificial intelligence is a permanent presence in our lives, necessitating a proactive approach to embrace its benefits and address potential drawbacks. Like any innovative technology, AI and models like GPT have the capacity to bring about transformative change, presenting both opportunities and unforeseen consequences. And papers like this are really good for improving the current knowledge of the society.

This paper discusses the benefits of the Artificial intelligence within the field of education, focusing on a topic that currently garners significant attention. Their article offers a comprehensive overview of GPT, detailing the ongoing debates surrounding its implications for education.

The paper is commendably well-organized, ensuring ease of comprehension for everyone, however, is a bit short and do not meet all that it is expected from the abstract. The paper predominantly revisits established ideas and engages in a rather broad discussion of the potential pros and cons associated with Gen AI, so, in summary, it is a good state of the art.
