The introduction (Data and History) has been well-written and effectively conveys the importance of the research topic. However, it seems that some revisions may be needed based on the following points.

1. There is no scientific evidence to support the researcher's claim. Statements without evidence are the author's opinion, making it difficult to consider them as scientific contributions.
2. The manuscript does not follow the general format of a classical paper.
3. There are unnecessary details such as "Dog", "Baiyun Mountain", "TikTok pictures", and "From Fish to Humans" in the pictures and videos section.
4. There are too many repetitive sentences, resulting in an excessive overall volume. It is necessary to paraphrase.
