

Review of: "CNN-MRI Detection of Fatty Infiltration, Rotator Cuff and Infraspinatus Muscle Atrophy in Shoulder Pain Patients"

ANGELIN JEBA Angelin Jeba

Potential competing interests: No potential competing interests to declare.

1. Give the detailed explanation about the dataset being used for the work. What are the reference planes used, whether coronal, axial, or sagittal views?
2. Explain the number of input images given to the input layer of the CNN. Whether an augmented dataset is used for research.
3. Whether the results are taken using a real-time dataset or an available dataset from an internet source.
4. A clear explanation of the CNN layers built should be given. What layers are involved and their depth should be mentioned.
5. Statistical analysis of your results should be done.
6. Related works should be compared to show the efficiency of our research work.
