

Review of: "Investigation of Mechanical Properties of Sisal Fiber and Sugar Palm Fiber Reinforced Hybrid Composites"

Parthasarathy Manimaran

Potential competing interests: No potential competing interests to declare.

Title of the manuscript: **Investigation of Mechanical Properties of Sisal Fiber and Sugar Palm Fiber Reinforced Hybrid Composites**

Comments to Author:

1. Provide references for the Introduction part properly.
2. Number of studies on Sisal and Sugar palm fiber composites already exist. What is the innovation aspect of the study in this work? Provide it at the end of the Introduction part.
3. Provide figures of the composite specimens.
4. For performing different tests, how many specimens were tested?
5. For each test, provide the results with standard deviation in Tables.
6. The results and discussion should be discussed more extensively by comparing with other hybrid composites and validating your results.
7. A comparison table should be provided with similar studies.
8. Stress – strain/Load - extension curves should be provided for tensile and flexural tests.
9. The Conclusion part should be modified to report the future extension of the work.

Kindly consider the above comments and incorporate them in your manuscript before publication in the journal.

Confidential Comments:

I have reviewed the paper. The work is properly carried out, and all the tests are explained. But the results are not compared with other fibers. If the results are validated, then accept the manuscript with major revision.
