

# Review of: "Giardia lamblia infection And Associated Risk Factors Among Patients Who Are Seeking Stool Examination At Bule Hora University Teaching Hospital, West Guji Zone, Ethiopia"

Aleka Aemiro

Potential competing interests: No potential competing interests to declare.

First of all, your introduction should be re-organized as

1. The first paragraph should contain general information about the title as you mentioned in the text that is good.

However, the rest paragraphs should be written as

- A. Worldwide
  - B. African
  - C. Sub-Saharan
  - D. Ethiopian level information with quantification about morbidity and mortality of the infection at each level.
  - E. Then about the risk factors and its transmission
  - F. Finally, well stated gap is needed
1. Is Teda Health center is found in Bule Hora or not, if it is found there, what is the need of doing this research again there? If not why do you use 12.4% from that area?
  2. Just italicize the scientific names E.g *Giardia lamblia* in sample size determination and the like.
  3. When I saw the data analysis of the risk factors, the Author should use logistic regression model so as to understand the strength of the association between dependent and independent variables. As to me chi-square perhaps as an additional analysis for logistic regression model.
  4. You need to revise the referencing style
