Thank you for the opportunity to review this article. I believe this research has an aspect that will contribute to the field. The paper focuses on the prevalence and socio-demographic correlates of alcohol consumption among adolescents in public secondary schools in Uganda. Overall, this is a very well written paper, with clear and concise description of the study and its results and relevance. I have only one suggestion about the methodology section that could be rearranged into the following: 2.1 Study settings; 2.2 Study sample; 2.3 Inclusion and exclusion criteria; 2.4 Study design and Measures; 2.5 Sample selection, and 2.6 Data analysis.
