

Review of: "Different pattern of menstrual in patients with COVID-19 infections"

Aline Henz

Potential competing interests: The author(s) declared that no potential competing interests exist.

I think this is a good study, in the actual story context, the number of study subjects are sufficient. The subject "pattern" could be changed, link "standard" (I do no, but I think gone fit better), and can you make a better introduction, with more information, about menstrual symptoms... Methods and results are very good explained, the tables are good.
