Potential competing interests: No potential competing interests to declare.

Fuzzy logic based MPPT is already discussed in many literatures. There is no novelty in the paper.

There is no proposed method section, missing from the introduction of paper organization . The paper is not organised.

Include the references number in the content. For example in section II, while discussing about various MPPT techniques mention reference numbers like [1], [2] ..

Check for grammar and spelling errors especially in figures Irradiance(W), current(A), voltage(v) are spelt wrongly.

In fig 7,8 what is in x axis? Temps? I think it is time(s).

The author is advised to read as much as possible research papers in this topic.

Section III should be simulation results and discussion. A detailed explanation of simulation results is required.
