# Review of: "Application of Eastern Philosophical Principles to Ethical Dilemmas in Daily Medical Practice"

Chidinma Madu<sup>1</sup>

1. Duke University Health System, Durham, United States

The article "Application of Eastern Philosophical Principles to Ethical Dilemmas in Daily Medical Practice" presents a valuable and timely perspective on the integration of Indian philosophical concepts into medical ethics. It concisely discusses foundational ideas from various cultural, religious, and ethnic groups and their relevance to guiding ethical decisions in healthcare. The writing is clear and organized, making complex philosophical ideas accessible to clinicians. However, the paper would benefit from empirical examples or application frameworks to bridge theory with clinical practice.

***How could the article better address potential challenges in implementing the proposed redesign?***

It lacks detailed, real-world examples or case studies showing how Eastern philosophies are applied in clinical settings.

The article could expand on potential conflicts between institutional medical policies (which often follow Western ethical frameworks) and Eastern principles, offering strategies for reconciliation.

Providing guidance or tools (e.g., ethical decision-making frameworks) for practitioners would improve its utility in real-time medical decision-making.
