Post-transplant lymphoproliferative disease

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Post-transplant lymphoproliferative disease. ORPHA:70568*

Post-transplant lymphoproliferative disease (PTLD) describes a heterogeneous group of lymphoproliferative diseases occurring in the context of post-transplant immunosuppression and ranging from benign polyclonal B-cell proliferation to malignant lymphomas.
