Potential competing interests: No potential competing interests to declare.

In the manuscript presented, the authors focused on developing a food data automation platform. To do this, they used a PaaS cloud computing platform. The overall idea is good; however, the manuscript lacks in the following aspects.

1. The abstract of the paper appears to be very weak.
2. The article suffers from a lack of motivation behind the work. This will strengthen the abstract.
3. The introduction section of the manuscript needs to be rewritten to boost the motivation of the work.
4. Please write the paper in a single language.
5. A literature review is not presented in the manuscript.
6. Lacunae of existing methods and the objectives of the proposed work are not clearly specified.
7. No specific block diagrams or flow charts are specified in the work section of the manuscript; this makes it difficult for the reader to analyze what the authors want to convey.
8. The results section also appears to be weak, and a proper comparison with state-of-the-art methods is expected in the results.
9. Computational or mathematical complexity analysis of the proposed method needs to be expressed in the manuscript.
10. Overall, the idea is good, but the work presented in the manuscript does not support it.
11. The manuscript needs to be fully modified.
