

# Review of: "A Mathematical Characterisation of COVID-19 in Mauritius"

Sohaib Ahmad Sirwal

Potential competing interests: No potential competing interests to declare.

The paper is well written. I suggest

1. The techniques used are classical and so how the results correlate with the actual findings should be discussed.  
Advantages and limitations of the techniques used should be discussed
2. Explore the scope of incorporating modern data driven techniques.
3. Comparison of results with other similar studies
4. Abstract, Introduction and discussions should be strengthened by citing additional references and comparisons.
5. Proof reading for minor grammatical mistakes.
