# Salivary Gland Mucoepidermoid Carcinoma

National Cancer Institute

## Source

National Cancer Institute. *Salivary Gland Mucoepidermoid Carcinoma*. NCI Thesaurus. Code C5908.

A carcinoma that arises from the salivary glands. It is the most common primary carcinoma of the salivary glands and usually presents as a firm and painless mass. It is characterized by the presence of epidermoid cells, mucus producing cells, and cells of intermediate type. The majority of cases have a favorable outcome.
