

Review of: "The Application and Pathway Regulation of Traditional Chinese Medicine in Lung Cancer Treatment: An Exploratory Review"

Fatemeh Aslanbeigi¹

¹ Kashan University of Medical Sciences

Potential competing interests: I had the chance to thoroughly review the revised manuscript. This study highlights the Application and Pathway Regulation of Traditional Chinese Medicine in Lung Cancer Treatment. The author/s concluded, based on this review study, that Chinese herbal formulas improving immune function, reducing adverse reactions to chemotherapy, and improving the quality of life, thereby comprehensively enhancing the treatment effects for lung cancer. I think this study can add meaningful information to the current literature. But, the manuscript in its current form needs some editing & revision. See my comments below. -Delete repetition of this statement " chemotherapy and radiotherapy are the main treatment methods for lung cancer, but due to their significant toxic side effects and the easy development of resistance, patients find it difficult to adhere to treatment, leading to low cure rates and high recurrence rates" -Delete unnecessary redundant paragraphs. -If you haven't already, please include your "highlights" which are 3-5 bullet points summarising the novel aspects and/or learning points (maximum 85 characters, including spaces, per bullet point). -Please go through your paper and proofread it to correct spelling, grammar and syntax errors. Best regards. Dr fatemeh Aslanbeigi

Review

I had the chance to thoroughly review the revised manuscript. This study highlights the Application and Pathway Regulation of Traditional Chinese Medicine in Lung Cancer Treatment. The author/s concluded, based on this review study, that Chinese herbal formulas improve immune function, reduce adverse reactions to chemotherapy, and improve the quality of life, thereby comprehensively enhancing the treatment effects for lung cancer. I think this study can add meaningful information to the current literature. But, the manuscript in its current form needs some editing & revision. See my comments below.

-Delete repetition of this statement " chemotherapy and radiotherapy are the main treatment methods for lung cancer, but due to their significant toxic side effects and the easy development of resistance, patients find it difficult to adhere to treatment, leading to low cure rates and high recurrence rates"

-Delete unnecessary redundant paragraphs.

-If you haven't already, please include your "highlights," which are 3-5 bullet points summarising the novel aspects and/or learning points (maximum 85 characters, including spaces, per bullet point).

-Please go through your paper and proofread it to correct spelling, grammar, and syntax errors.

Best regards.
