

# Review of: "On the rheology of thixotropic and rheopexic suspensions: accounting for the formation of trimmers"

Jacob Nagler

Potential competing interests: No potential competing interests to declare.

The article: "[On the rheology of thixotropic and rheopexic suspensions: accounting for the formation of trimmers](#)" is well presented and should be published.

Minor Revision is suggested as following:

- The mathematical formulation is well analyzed, compared (to one Ref. [8]) and presented. Yet, the author should also consider FEM simulation comparison or experiment.
- Finally, few more recent references should be considered during the introduction review section like:
