Potential competing interests: No potential competing interests to declare.

The paper aims to detect people's behavior. The innovation and contribution of this paper are not satisfactory.

1. The motivation of the method should be explained more clearly.
2. Authors need to establish the clear superiority of their new methodology through comprehensive comparison results with very recent algorithms. The performance advantage is not significant. The contribution of this paper is small. Thus, the paper in its current form is not suitable for publication in this journal.
3. The introduction and related work contents are confusing, and the logic is unclear.
