Potential competing interests: No potential competing interests to declare.

The title is clear and guides the content of the research.

The proposed study is interesting and provides specific information about a group of workers from a region of Kenya.

The summary is written correctly, as well as, the keywords are appropriate.

It is recommended to check the grammar and language of the writing.

The role of pastoralists is well indicated, could this study also be applied to farmers or those who do agriculture?

It should be indicated in some paragraph of the methodology that qualitative techniques are used.

The identification of zoonotic diseases that occur in rural areas was very interesting, from the One Health perspective.

It could be interesting to map the risk areas according to each disease based on rates and indicators in order to guide specific prevention measures.
