

# Review of: "Research on the uncertainty of low-carbon environmental governance system and its impact on the dual goals of carbon emission reduction"

Fagang Hu

Potential competing interests: No potential competing interests to declare.

1. The **defects** of the research further explore the uncertainty of the ecological environment under low-carbon governance and its impact on the quantity and intensity of carbon emissions from the theoretical and experimental perspectives.

**Whether the word “defects” is used incorrectly?**

2. **figure 1** “On the far left is the uncertainty of the low-carbon governance system, not the low-carbon governance system”.

3. the “**Table 1. Correlation analysis of variables**” and “**Table 2. The weight of the operational layer of low carbon governance environment uncertainty**” are out of order.

4. **Table 1. Do variables need to be removed if they are correlated? Whether it affects the conclusion.**
