Iratumumab

National Cancer Institute

Source

National Cancer Institute. *Iratumumab*. NCI Thesaurus. Code C26441.

A fully human monoclonal antibody with potential antineoplastic activity. MDX-060 is a fully humanized antibody that targets CD30, a member of the tumor necrosis factor receptor superfamily found on activated lymphocytes. CD30 is over-expressed in various lymphoproliferative disorders, Hodgkin disease and other lymphomas, and other cancers. (NCI04)
