I believe the paper addresses a significant issue, ESD, and presents the findings of a valuable research study. The designed product, the ESD-integrated Coastal Conservation Education Kit, is critical for learners' ESD awareness and competency development. The kit can serve both local and global purposes.

I have some recommendations for improving the paper. The problem regarding coastal abrasion needs more explanation, and it could be linked to specific SDGs. A brief background about the ESD approach can be provided too. The methodology section will improve to a great extent if the author(s) provide detailed information about the experts, students, and teachers who participated in the study. I believe the number of learners and teachers could be higher for reliability. The relationship between the specific SDGs mentioned and the Edu Kit needs to be explained. Details on the development of interview questions are needed. The paper also requires proofreading for grammatical accuracy and in-text citations.
