Review of: "IoT Noise And Air Quality Observation System"

Haidar Zaeer Dhaam[1]

1 Al-Furat Al-Awsat Technical University

Potential competing interests: No potential competing interests to declare.

The paper provides a good overview of the system's components and operation, including diagrams and explanations.

The paper lacks technical depth in explaining the design and implementation of the system. More details about the sensors, data processing algorithms, and communication protocols would be beneficial.

Clarity of figures and tables: Some figures and tables are not clearly explained and referenced in the text.

Limited discussion of results: The discussion of the simulation results is brief and could be expanded to analyze the performance of the system under different conditions.

Citation format: The references are not formatted consistently.
