Corynebacterium Granulosum P40

National Cancer Institute

Source

National Cancer Institute. *Corynebacterium Granulosum P40*. NCI Thesaurus. Code C990.

An insoluble fraction isolated from the bacterium *Corynebacterium granulosum* with potential cancer immunotherapeutic activity. As a non-specific immunostimulant, *Corynebacterium granulosum* P40 activates the reticuloendothelial system, induces the production of certain cytokines, enhances macrophage activity, and potentiates a delayed-type hypersensitivity response when co-administered with an antigen. (NCI04)
