

Review of: "The Link Between Gastrointestinal Microbiome And Ocular Disorders - A Review"

Salman Zahid

Potential competing interests: The author(s) declared that no potential competing interests exist.

Introduction:

Is association with ocular inflammation a better term?

The heading The GI microbe is not very novel and does not add much to the manuscript. Hence can be removed.

“Laboratory analysis of aqueous humour confirmed the intraocular gut microbiota, which now opens many avenues for us to explore the implications of such findings” I would suggest the authors elaborate further on what they mean by this statement.

In the conclusion section, I would suggest using the term association and not correlation.
