Potential competing interests: No potential competing interests to declare.

Overall, the manuscript provides a valuable contribution to the ongoing and much-needed discussion on AI in healthcare. With some revisions to improve conceptual clarity, incorporate recent developments, and work on the analysis of key issues, it has the potential to make a significant impact in the field.

1. The manuscript could benefit from a more extensive review of recent literature to ensure all relevant developments are addressed.
2. There are instances where concepts could be further elaborated to enhance clarity, especially regarding the implications of specific AI technologies on healthcare delivery.
3. The commentary lacks thorough discussion of the latest research and emerging trends in the field. Including recent studies and developments would strengthen the manuscript's relevance and currency.
4. The manuscript is well-written, but attention to word choice and sentence structure could further enhance the manuscript's clarity and impact.
5. I couldn't find a figure legend in the manuscript. The authors should provide it.
6. The authors should not label the figure as 'Figure 1' since they haven't referred to it as such in the text.
7. A deeper analysis and discussion of specific case studies or examples could enrich the manuscript's content and provide a more nuanced understanding of the issues at hand.
8. The manuscript lacks a commentary/review/debate on potential solutions and regulatory frameworks regarding the topic.
