# Allogeneic Large Multivalent Immunogen Breast Cancer Vaccine

National Cancer Institute

## Source

National Cancer Institute. *Allogeneic Large Multivalent Immunogen Breast Cancer Vaccine*. NCI Thesaurus. Code C79799.

A cancer vaccine, containing human-specific large multivalent immunogens (LMIs) isolated from the membrane fraction of cells from a breast cancer cell line, with potential immunostimulatory and antineoplastic activities. Upon administration, allogeneic large multivalent immunogen breast cancer vaccine may stimulate a cytotoxic T lymphocyte (CTL) immune response against tumor cells that express the breast cancer cell-specific LMIs.
