

Review of: "Approach to Data Science with Multiscale Information Theory"

Wanming Ying

Potential competing interests: No potential competing interests to declare.

This article provides a detailed theoretical derivation to make it easier for readers to understand Multiscale Entropic Dynamics (MED). But some real data can be considered in this article to validate the effectiveness of the MED method and increase the readability of the manuscript. This is a well written manuscript that can be considered for publication in Qeios.
