Review of: "A VAR Framework of Exchange Rates, Interest Rates, and Inflation Through COVID-19 in Turkey: Empirical Evidence From Linear Cointegration and Causality Analysis"

Diyah Sukanti Cahyaningsih[1]

1 Accounting, Universitas Merdeka Malang, Indonesia

Potential competing interests: No potential competing interests to declare.

1. Make sure the article clearly explains the purpose of the research from the beginning, especially in the context of the impact of COVID-19 on the Turkish economy.
2. Although the article uses the VAR model, it would be better if the author explained why this model was chosen over other methods.
3. Discussing the policy implications of the research findings can be expanded to provide recommendations for policymakers in Turkey.
4. This article will greatly benefit from more references to previous studies, especially those using the VAR model in macroeconomic analysis during the pandemic.
5. Limitations and suggestions for further research need to be listed.
