GPRC5C wt Allele

National Cancer Institute

Source

National Cancer Institute. *GPRC5C wt Allele*. NCI Thesaurus. Code C51461.

Human GPRC5C wild-type allele is located within 17q25 and is approximately 20 kb in length. This allele, which encodes G-protein coupled receptor family C group 5 member C protein, is involved in a function that has not been identified to date, however; it may play a role in the mediation of retinoic acid effects on G protein signal transduction.
