

Review of: "Synthesis, Characterization and Ameliorative Effect of Iron Oxide Nanoparticles on Saline-Stressed Zea Mays"

Dulce Nicolas

Potential competing interests: No potential competing interests to declare.

The article is really interesting, so I consider that it needs to improve some aspects:

1. Use a lot of abbreviations.
2. Be careful, especially in chemical nomenclature; some equations do not have a subindex or supraindex, for example, in the ions.
3. I would like to read more about the novelty, specifically the method to create the FeO NPs.
4. The introduction is too wide. Needs to be more specific.
5. The graphs and images need to be improved and to specify the post-hoc statistical analysis.
6. In my opinion, this article could be accepted with major corrections.
