**Abstract:** The abstract provides a concise summary of the study. The study objective and research methodology and the key findings are well summarized. In my view this is comprehensive and acceptable.

**Introduction:** This provides a brief but adequate context of the study including unwanted pregnancies among girls and young women, including migrant female head porters. The factors associated with unwanted pregnancies are discussed. The section also discusses the increasing trend of migration of girls age 12-30 from Northern Ghana into the cities of Accra and Kumasi to work as head porters. Further the section reviews the literature of factors affecting contraceptive use in Ghana and elsewhere.

**Methodology:** This section discusses in some details the study design, sampling procedures as well as data collection and analysis methods and plan. This research methodology is appropriate and has been described and explained adequately

**Results:** The results are well presented and logistic regression coefficients are interpreted accurately.

**Discussion:** The results are discussed satisfactorily in relation to the study objectives and in the context of the literature reviewed.

## My verdict & recommendation

In conclusion, this article makes an original contribution to knowledge about factors associated with contraceptive use among migrant female head porters in the city of Kumasi and the surrounding areas [metropolis]. It should be accepted for publication in your esteemed journal.
