A nice piece of work, entitled “ Reprogramming of GLP-1 response at prediabetics for the prevention of type 2 diabetes , the role of albumin and GLP-1 receptor agonists,”. The authors claimed that GLP-1 receptor agonists would be a good method to help prevent Type 2 diabetes. However, some details are needed about the relation between albumin level and GLP-1 receptor agonists. Also, what about the diet and life style for prediabetics?
