Potential competing interests: No potential competing interests to declare.

Although I find the topic interesting, I am not competent to review the content of the article. Nevertheless, I wanted to make 2 comments. Firstly, the addition of figures would be appreciated to better apprehend the chosen approach, and the geometric parameters.

Secondly, although it's not the heart of the paper, it might be interesting to talk about visibility and the effect of atmospheric absorption and scattering. An aspect studied by Pierre Bouguer as early as the 18th century: Middleton, W. K. (1960). Bouguer, Lambert, and the theory of horizontal visibility. *Isis*, 51(2), 145-149.
