

Review of: "A Mini-Review On MXene Based Textiles For Electromagnetic Interference Shielding Application"

Ran Li

Potential competing interests: The author(s) declared that no potential competing interests exist.

For a review paper, the number of 38 documents is not enough, which will make people doubt whether the review represents a universal view in this field. The author should describe the research progress more than the basic principles. The author introduces each document in detail, more like a chapter of a book. In addition, comparison with other materials in the same field is also necessary. Authors should show the superiority of Mxene to show that this material has a bright future.
