# Acute Myeloid Leukemia with Myelodysplasia-Related Changes

National Cancer Institute

## Source

National Cancer Institute. *Acute Myeloid Leukemia with Myelodysplasia-Related Changes*. NCI Thesaurus. Code C7600.

An acute myeloid leukemia with at least 20% blasts in the bone marrow or blood, and either a previous history of myelodysplastic syndrome, multilineage dysplasia or myelodysplastic syndrome-related cytogenetic abnormalities. There is no history of prior cytotoxic therapy for an unrelated disorder, and there is absence of the cytogenetic abnormalities that are present in acute myeloid leukemia with recurrent genetic abnormalities.
