

# Review of: "[Review Article] A Comprehensive Overview on Pharmacological and Therapeutic Insights of Solanum nigrum Linn"

Sabyasachi Banerjee

Potential competing interests: No potential competing interests to declare.

In my opinion, this manuscript needs significant improvement. The construction of the article is of poor quality. The literature search criteria should be detailed. Moreover, the pharmacological activity of *S. nigrum* should be well organized and detailed. The data should be represented in a table for better readability. Regarding the chemical structure, authors should incorporate structures made in ChemDraw/ChemSketch. All the scientific names should be written in italics. A few excellent review articles are present on the internet, which has been written elaboratively; authors need to follow those to get some idea.
