The paper "The Relationship Between AI Tools and Their Aspects in Higher Education" by Nanjundaswamy Abhishek and Suraj Neethu from Srinivas University examines the impact of AI technologies, such as ChatGPT and chatbots, on higher education, especially during the shift towards online and blended learning models induced by the COVID-19 pandemic. It utilizes a mixed-methods approach to explore educators' awareness, benefits, opportunities, and challenges of AI adoption in higher education institutions. The study reveals that increased awareness positively influences AI adoption, while challenges serve as barriers, indicating the transformative potential of AI in higher education but also highlighting that its full benefits and opportunities are yet to be fully realized. The paper emphasizes the importance of ethical integration and calls for collaborative efforts to address the challenges presented by AI technologies.
