Dear Editors and Authors

Thank you for allowing me to review this important article.

The article is well-written and addresses an interesting topic; however, some concerns need to be addressed.

1. The discussion needs to be more detailed, with emphasis on the biochemical and immunological mechanisms of inflammation that are linking the proinflammatory state of the body to the development of vasculitis.
2. More data on patient history should be added, including a history of co-morbidities, a history of prior vaccination to COVID-19, and medication history if available. The vision and onset duration can be mentioned as mean \pm SD in the table.
3. The small sample size should be included in the limitations of the study in the discussion.
